

Oncology: Common ICD-10-CM Sign and Symptom Codes

Listed below are the ICD-10-CM codes commonly received by Labcorp from ordering physicians for oncology testing. Code descriptions were taken from the official code set, issued by the US Department of Health and Human Services, as updated effective October 1, 2024 through September 30, 2025. Depending on the nature of your practice, this list may be a useful reference tool; however, it is not a complete list. Please refer to an ICD-10-CM manual for a complete listing. Responsibility for the provision of correct diagnosis code(s) is with the ordering physician. The ordering physician must always determine, for the specific date of service, the appropriate diagnosis code(s) based on the patient's signs and symptoms. ICD-CM codes in effect at the time of service are required by third-party payers to support the medical necessity of the test(s) and/or profile(s) ordered. Physicians are asked to submit all medically appropriate ICD-CM codes when ordering laboratory testing.

Labcorp's provision of this information as a customer service does not suggest and is not meant to suggest that any of these codes should or should not be used on any given occasion. Labcorp makes no recommendation regarding the use of any particular diagnosis code(s). Diagnosis information should be reflected in the patient's medical record.
