

# Program Management

**You define your program or portfolio needs. We'll handle the rest.**

Oncology discovery programs involve many moving parts, and it's critical to keep on track. Program management makes it easy. By choosing program management, you'll receive comprehensive support to provide your program with the attention it needs across teams according to your milestones.

## A real relationship that guides you through your program

Feeling overwhelmed by the number of people you need to speak with or what should come next in your program? We'll pair you with a program manager, a dedicated specialist who advocates on your behalf for the best interest of your program enabling you to get further, faster. Your program manager works as your central point of contact, pulling in experts when you need them most to proactively guide your program across drug development.

## Key role of a program manager:

Maintain global oversight of all projects within the team

Facilitate scientific discussions between you and the study director and scientific and regulatory experts

Provide broad understanding of regulatory drivers

Achieve critical milestones

Monitor and update progress of studies/projects

## Customized tools keep studies on track

Take advantage of the critical ways your program manager will keep you informed of your program's progress.

- **Status Report:** Communication is key, and your program manager will give you status reports that keep you informed on the progress of your program. The report is updated regularly, synchronizes all activities and ensures accountability across teams
- **Gantt Chart:** Get a customized Gantt chart that's proactive, planning your program from start to finish. The chart also helps keep milestones on time and can be optimized with the help of your program manager to flex when needed, giving you the strategy you need when changes arise
- **Regularly Scheduled Meetings:** Option for regularly scheduled meetings at your desired frequency to check in on current projects, discuss incoming data, and collaborate on future studies and next steps
- **Risk Assessment:** Risk management is essential for any program. Get access to a customized risk assessment when needed from your program manager that includes planning for potential risks, upfront identification of risks, evaluation, and planning for resolution

“Our Program Manager provides constant support and scientific guidance for all of our studies and is always available to help. We are on extremely tight timelines and our Program Manager co-ordinates everything to make sure all of these are met.”

— Biotech Client, Senior Director
